

LOADING STATION FOR LIQUIDS

The loading arm station is an excellent solution for effortless bottom loading. Due to swivelled loading arms, the divided sections of the tanker can be loaded simultaneously without moving the tank truck.

Loading arms with 4-swivels and flexible hoses guarantee wide operating range on both sides of the loading station.

The dimensions, number and materials of loading arms can be customized for individual intended use.

These loading arms are CE-marked according to EU directive of machinery 2006/42/EC. They also fulfill the requirements of "Metallic industrial piping, EN 13480-1-4:2017" and pressure equipment directive 2014/68/EU (PED). Also EX-requirements fulfilling versions available.
