

LIQUID CONTAINER SAFETY STRUCTURE

This safety structure on top of 20' containers is a cost-effective way to ensure safe work on top of containers.

The safety structure is lifted onto the container with a forklift or crane. Due to the fixed corners, many safety structures can be stored on top of each other.

The container safety structure can be customized for individual intended use. The usability can also be improved with additional accessories such as a canopy and ladders.

The safety structure is manufactured from sturdy structural steel and is designed according to "Safety of machinery, Permanent means of access to machinery" EN ISO 14122-3:2016 standard. EX-requirements fulfilling versions available at request.
